

COPPER SINK CARE

Gentle soap and water will maintain the sink.

The nature of copper allows the sink to change color with use. This adds to the beauty and character of copper sinks.

The wax that is applied to the sink during the heat-set patina process will wear off over time and a new coat of a paste wax should be applied periodically.

No abrasives or harsh chemicals should be used. Avoid the use of antibacterial soap, as it also has the tendency to harm the patina finish.
