

WHITE BRONZE SINK CARE

White Bronze is a cast metal that has the appearance of brushed or satin nickel.

Gentle soap and water will maintain the sink.

No abrasives or harsh chemicals should be used.

White Bronze is not plated, but is a solid color throughout. It can darken over time but unlike nickel plated sinks it can be buffed with a green scrubber to restore the original finish.

A clear paste wax can be applied to the sink in order to slow down the darkening of the sink.
